HEARING AID ORDER REQUIREMENTS

MODEL

NOW NT 325 NOW NT 165 Source 45
 NOW NT 245 NOW 85

STYLE OPTIONS

In-The-Ear In-The-Canal
 Half Shell Completely-In-Canal

ADDITIONAL OPTIONS

REAL EAR READY YES

DIRECTIONAL (Not available in CIC) INDUCTION COIL (Not available in CIC)

Left Right Left Right

USER VOLUME CONTROLS (Standard is default on ITE-ITC)

None Continuous Rotary
 Standard Tall Continuous Rotary
 Tall Standard Screw Set (CIC only)

MULTIMEMORY (Push Button)

Left Switchless Right Switchless Left Push Button Right Push Button

FACEPLATE OPTIONS

FACEPLATE COLOR

Pink Medium Brown*
 Light Brown Chestnut Brown*
 Dark Brown*

*Clear shell is default if selected

REMOVAL & FINISH OPTIONS

Removal Notch
(Not available on CIC)
 Removal Handle
 Dull/Matte Finish

SHELL OPTIONS

SHELL COLOR

Pink Clear
 Light Brown Blue/Red

WAX PREVENTION (Hear Clear is default)

Extended Receiver Tube
 Biconic Waxguard

VENTING OPTIONS

VENTING

No Vent Mini Vent IROS Open Vent
 1 Vent Variable Vent
 2 Vent IROS Vent

Okay to change BATTERY size if necessary w/o phone call

Okay to change VENT size if necessary w/o phone call

WARRANTY OPTIONS (REMAKE/REPAIR/LOSS & DAMAGE)

2nd Year 3rd Year 4th Year 5th Year
(Source 45 only)

SERVICE OPTIONS

One Day Service Same Day Service

SPECIAL INSTRUCTIONS

Internal use only: IMP10 IMP15 OF10

Impression Instructions

- 1) Using an otoscope, inspect the ear canal for anatomical landmarks and verify it is cerumen free.
- 2) Place a flattened cotton block lubricated with OtoEase 8 to 10 mm beyond the second bend, near the eardrum.
- 3) Place the syringe deep into the ear canal and slowly pull back as the ear canal fills with the silicone impression material.
- 4) Once material is set, remove impression, being sure to break the seal via patient jaw movement and ear manipulation.
- 5) Inspect ear impression – Retake impression if not correct.

Impression Reference Instructions

At the heart of any good hearing aid fitting is the impression. There is no hearing instrument technology or physical modification that can substitute for a good impression. A good impression that goes beyond the second bend of the ear canal is required for the best patient result. It is best to use a flattened cotton block versus the foam block that takes up space in the ear canal and leaves it under filled with short canals. In short, follow these basic guidelines:

- 1) Examine the ear to select block size.
- 2) Place the flattened block past second bend and examine placement.
- 3) Inject the material with syringe tip deep in the canal.
- 4) Wait and remove the impression.
- 5) Inspect your work – Retake impression if needed – Pack impression with order form for shipping FedEx overnight.

Impression Checklist

When the impression has been completed, the following points provide a useful checklist to ensure the impression is ready to be sent for production:

- Is the helix and antihelix complete?
- Does the impression have a smooth finish?
- Ensure there are no air, hair, or wax voids.
- Is the canal sufficient to define the second bend of the ear canal?
- Is the tragus portion of the ear clearly defined?
- Is the concha complete?
- There are no weld marks (caused by the impression material drying too quickly).
- The edges of the folds in the concha should not be rounded but well defined — avoid mashing the material in the concha against the pinna.

CORRECT

Canal, concha and helix adequately filled. Canal block left attached.

INCORRECT

Insufficient canal depth. Canal block not placed deeply enough in the ear.

INCORRECT

Slanted, under filled canal due to improper placing of block in ear. Helix either under filled or pressed out.

INCORRECT

Gaps or weld marks. Overall surface of impression not smooth.
