## Good looks are only the beginning.

The perfect marriage of cutting-edge technology and exquisite design, it is the only hearing solution on the market positioned to offer it all: extraordinary beauty, ultimate comfort, and best-in-class performance.

What makes Vue so supremely unique? Exeleron Technology, AudioSync's proprietary system, efficiently integrates Vue's best-in-class features to create the industry's best outcomes. When noise levels change as you move through different environments, your hearing aid changes with them. Unwanted whistling, otherwise known as feedback, virtually does not happen. And talking on the phone can be effortless and more enjoyable, since Vue automatically adjusts upon detecting a phone signal.

By any measure, Vue is the most advanced hearing solution on the market today. Designed to be as pleasing to the eye as it is to the ear, it provides the most natural hearing experience modern science has to offer.

# Vue. The sound choice.

AudioSync Vue was compared to leading receiver-in-canal products from GN ReSound, Oticon (2 devices depicted), Phonak, Siemens and Unitron.

## Enjoy life's simple pleasures.

The biggest problem hearing aid wearers experience is that annoying whistling called feedback, which can be caused by any number of things, such as hugging a loved one, having the hearing aid brushed by hair, or simply being outside on a windy day. Thanks to a breakthrough feature called **Sound Shield**, Vue hearing aids virtually eliminate buzzing and whistling, no matter what may have caused it in the past.

## Hold a conversation anywhere.

Chances are you can hear the voices that are directly in front of you when in quiet situations, but have trouble when the noise level increases, like while in a restaurant with family and friends. With this common complaint in mind, Vue was designed to include technology called **Sound Positioning System**, resulting in extraordinary directional performance and better understanding in noise. You've always wanted to hear individual voices in a crowd. Now you can.

## Optimal listening on the phone.

Anyone who wears hearing aids knows telephone conversations can sometimes be difficult. With **Automatic Telephone Response**, Vue virtually eliminates feedback while automatically adjusting for optimal communication on the telephone.

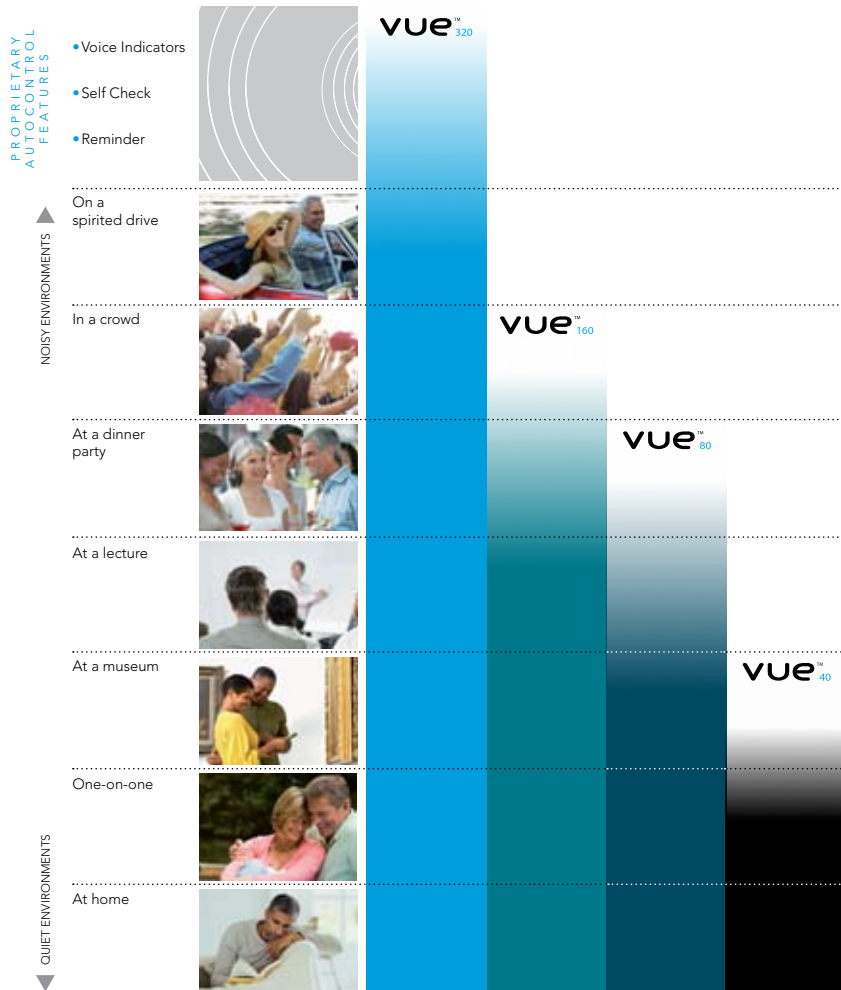

# Vue: Offering the widest range of options available.

Vue is the best receiver-in-canal product available on the market today with its best-in-class features optimized by Exeleron Technology. This hearing aid has been designed to perform well in the most challenging listening situations—in a restaurant, driving in a car or listening to a child’s voice.

Vue is available in four technology levels. Each one, as shown to the right, is designed to perform in specific listening environments. Depending on the nature of your listening needs, there is a Vue hearing aid that’s right for you.

Consult your local hearing professional to experience Vue today.

## Lifestyle Usage Guide

## Looks as good as it listens.

Vue was designed to be just as advanced on the outside as it is inside, taking size, comfort, and style to a whole new level. How? Again, Exelaron Technology, which allows Vue to be made as small as possible, while still performing like no other hearing aid available today. Developed by industrial designers, researchers, and tested with patients for optimal comfort, ergonomic accuracy, and cosmetic fit in rich color options to complement and match hair and skin tones.

Vue, the ultimate hearing experience.  
Try it on today.

Be confident  
knowing you have  
the best-in-class.

Congratulations on your journey to improved hearing. Only one out of five people with hearing loss actually seeks help, so by visiting your hearing care professional, you've already taken a big step.

After being fitted with Vue, you'll have the satisfaction of knowing you're wearing one of the world's most advanced hearing aids: fully automatic, comfortable, and crystal clear.
